JB-POWER HOLLOW CHROMOLY SHAFT

Due to the rigidity of high grade chromium molybdenum steel JB-POWER shafts provide not only improved cornering stability but also save weight thanks to their hollow structure. The shiny surface finish is achieved by electro less nickel plating. Designed to improve performance and rigidity, there might be a slight weight increase, compared to the genuine shaft, depending on the model. The improved stiffness and rigidity result in more information being transferred to rider leading to a direct feeling with improved control and total peace of mind.

JB-POWER HOLLOW CHROMOLY SHAFT QUICK CHANGE

When using the JB-POWER quick change system, changing wheels is done in the blink of an eye. Certainly for racers yet for streets users as well, the burden of maintenance is reduced, and many advantages are obtained.
